

Lesson 4 – Procedural vs OOP

Answers based on the uploaded lesson file

Think–Share: Library Management System

Note: The file gives the activity instructions but does not provide specific answers. The following are examples based on the concepts and examples in the lesson.

1. 1. Book

Data: title, author, ISBN

Behaviors: borrow(), return_book()

2. 2. Student/Member

Data: name, ID, course

Behaviors: borrow_book(), view_books()

3. 3. Librarian

Data: name, ID, department

Behaviors: add_book(), record_borrowing()

4. 4. Library Record

Data: book, member, date

Behaviors: record_transaction(), show_info()

Check Your Understanding

5. 1. What is the main focus of procedural programming?

It focuses on procedures/functions and the sequence of instructions the program should perform.

6. 2. What is the main focus of OOP?

It focuses on objects, which contain related data and behavior.

7. 3. In OOP, what two broad things can an object contain?

Data (attributes) and behavior (methods).

8. 4. Give one possible object in an online shopping system.

Product.

9. 5. Give two attributes and two behaviors for that object.

Attributes: name, price
Behaviors: sell(), restock().

Exit Ticket / Short Assessment

10. A. In 1–2 sentences, differentiate procedural programming from OOP.

Procedural programming organizes solutions around procedures and functions, while OOP organizes solutions around objects.

11. B. For a Hotel Reservation System, identify 3 possible objects.

Guest
Room
Reservation

12. C. Choose one object and list 3 attributes and 2 behaviors.

Room
Attributes: room number, type, price
Behaviors: reserve(), show_info()

13. D. Why might OOP be helpful when the system becomes larger?

OOP helps organize related data and behavior, makes code easier to maintain, and becomes more useful as systems grow.
